## **DEFAULT CREW WEIGHT**

### **PROPOSAL**

To check the VPP with regard to default crew weight.

### **RATIONALE**

1. It seems the VPP is different when the default crew weight is used or if the same value of crew weight is declared. We think in these cases when the default crew weight is the same as the declared crew weight, the VPP should use the default weight.
2. It seems the formula to calculate default crew weight changes with the declared crew weight. The formula of default crew weight is with trim measurement parameters, so for this reason we think there are mistakes in the VPP to apply this formula.
