## **OVERALL TREATMENT ON A BEAT**

### **PROPOSAL**

Revise the reefing algorithm so that a jib is used on a 20 knot TWS beat. The reef parameter is 1.00 even for boats that have no chance of carrying a 130-150% genoa.

### **RATIONALE**

Almost all boats having a genoa use a jib on a 20 knot TWS beat, but still get a rating disadvantage compared to boats having only a jib.
