## **OFFSETS FILE EDITOR**

### **PROPOSAL**

Supply the Rating Offices with proper Windows-based software to allow them to create/modify offsets files.

### **RATIONALE**

This request was approved in 2007 and a quick solution to this problem was promised. The viewing aspect of offsets files has been properly addressed. Now it is the turn of the editing aspect. We are still waiting for an adequate tool which will allow the rectification of all conversion mishaps that occur during the importation process. This tool must not be required to work within DOS any more.
