## **DEFAULT AMG**

### **PROPOSAL**

Calculate the default AMG value as  $0.75 * ASF$  default in order to minimize the effect of the default asymmetric spinnaker area in case a Code 0 is the only downwind sail present in the sail inventory.

### **RATIONALE**

According to ORC RR 114.5, the default area of the asymmetric spinnaker is assumed in the presence of a Code 0 and the absence of an asymmetric spinnaker. The default area is large enough to calculate a significantly unfavored rating for this case.
