## **MAXIMUM AREA OF STORM SAILS**

### **PROPOSAL**

Remove Storm sails areas from the ORC certificate or at least use IG to calculate area of heavy weather jib and storm jib.

### **RATIONALE**

Today IM is used to calculate maximum heavy weather jib and storm sail area. OSR 4.26.4 does not reference to IM. The only measure is ~~%foretriangle height~~ and ~~%foretriangle squared~~.+According to ERS this foretriangle height is from the coachroof to headstay attachment to the mast.
