PROPOSAL

Establish a policy on the possible use of dynamometers in verifying the weight of a boat during events.

RATIONALE

After the European Sportboat Championship Sportboat 2018 it has been noted there is a growing demand from Owners for clarification about the rules governing use of dynamometers for verifying boat weight with possible discrepancies from a regular ORC International Certificate.

This verification procedure with a dynamometer is unwarranted, time consuming and generates confusion as well different results which are legally difficult to reconcile, and therefore it is viewed with disfavor.
