## **ASYMMETRIC SPINNAKERS WITH OR WITHOUT POLE**

### **PROPOSAL**

When both symmetric and asymmetric spinnakers are in a sail configuration, it should be possible to choose whether the use of the Asymmetric spinnaker is on a Pole.

### **RATIONALE**

When there are both symmetric and asymmetric spinnakers in the sail configuration with SPL and TPS recorded, a VPP run is done for all possible combinations, even if an asymmetric spinnaker is not necessarily used with a pole in all cases. Therefore, it should be an option to declare if the asymmetric is used on pole in such configurations.
