## **ASYMMETRIC SPINNAKERS ON SHW LIMIT**

### **PROPOSAL**

Review VPP effects of asymmetric spinnakers with SHW just on the 75% SFL limit

### **RATIONALE**

Recent designs of asymmetric spinnakers such as the Technora A0 has an SHW just on the 75% SFL limit, but the cut and design is much closer to the Code 0 (Headsail set flying) where SHW is less than 75% SFL. While Headsails set flying have more significant effects on the rating, it seems that this Technora A0 design is still rated as an asymmetric spinnaker but in fact is used in TWA's of a Headsail set flying, namely 60 / 75 / 90°.
