## **INCREASE VPP TRUE WIND SPEED – 24 (26) KNOTS**

### **PROPOSAL**

To extend the range of true wind speeds to the value of 24 knots (maybe even 26 knots?) in the tables of yacht performance predictions.

### **RATIONALE**

Long distance races may be held in wind speeds higher than 20 knots. The ORC ("offshore") formula is dedicated mainly to yachts in offshore regattas. It would be reasonable to extend the range of the wind speeds of the value of 24 knots, maybe even 26 knots, to improve the scoring results of the regatta, which may often be scored in suggested wind speeds.
