RACE RATINGS ON CERTIFICATES

PROPOSAL

Provide on ORC certificates pre-defined course ratings for specific events which have course models defined, as well as generic models of courses with a variety of wind mixes.

RATIONALE

Many race organizers are not familiar with use of scoring software that can create custom courses for their races and rely solely on the options shown on ORC certificates and available in the RMS files. Providing a greater variety of options shown on the certificate will allow both the organizers and the sailors to see their ratings at a glance without have to learn and operate scoring software to generate scratch sheets for these non-standard courses.
